## Adaptations

I can describe the adaptations plants and animals have to survive in their environments.

1. **Directions:** The video mentioned some adaptations different animals have to help them survive. Use what you learned to complete the empty boxes in the information table below.

				
<b>Animal/Plant</b>	<b>Blue Heron</b>	<b>Wood Duck</b>	<b>Polar Bear</b>	<b>Cactus</b>
<b>Adaptation</b>	A long, pointed beak	Webbed feet		
<b>How this adaptation is helpful for survival</b>			This behavior conserves energy and helps bears survive long, cold winters when food is scarce.	These structures protect the plant from animals trying to get water stored in the stem.

2. **Explain:** How are soccer cleats and a bison's hooves similar? What is their special function?

---

---

3. **Elaborate:** How are you adapted for your environment? Describe two adaptations and explain how they help you survive.
